Initially, it is noted that this application contains claims to the following patentably distinct inventions:

- I) claims 1-26 and 39-41, drawn to a self-supporting film and package,
- II) claims 27-38, drawn to a process.

During a telephone conversation with Mr. John Hendrickson on 3/4/05 a provisional election was made without traverse to prosecute the invention of Group I, claims 1-26 and 39-41.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Cancel claims 12 and 27-38.

In claim 1, line 1, after "conductive" add
--fluoropolymer--.

In claim 13, line 1, change "claim 12" to --claim 1--.

In claim 14, line 1, change "claim 12" to --claim 1--.

Art Unit: 1751

In claim 39, line 2, after "conductive" add
--fluoropolymer--.

Authorization for this examiner's amendment was given in a telephone interview with Mr. John Hendrickson on 3/4/05.

The following is an examiner's statement of reasons for allowance:

Greer et al (6,440,332) discloses a coating system for ferrous and nonferrous metal substrates that provides cathodic protection from corrosion by coating with inherently conductive polymers and sacrificial anodic metal particles. The coating system is formed by a process that includes forming a melt, and subsequently subjecting the melt to a cooling and flattening operation. The extrudate is cooled and flattened into a sheet about 0.005 inch thick by passing it through chilled nip rolls and cooled on an air or water cooling belt (Col 7, lines 33-65).

Greer, however, does not disclose or fairly suggest forming a sheet (self-supporting film) wherein said matrix polymer is a fluoropolymer.

The remaining cited prior art are state of the art sulfonated lignin compositions.
